Greetings,

Welcome to our 9<sup>th</sup> Annual Angus Bull Sale. Looking back on the last nine years, it is amazing to look at the changes we have made in our herd. We think we have made a lot of progress towards providing some nice Angus bulls for you, our customers.

Each year we continue to refine our breeding program and criteria; selecting sires that bring superior traits to our herd. Our goal is to use genetics that will make you more money in the commercial herd. We know you can get great genetics from many breeders, but we believe good Angus bulls that are raised here in our rocky, dry, tough country have added value. MLL bulls know prickly pear, burro grass and chamisa and are grown out in large rocky traps; so they are in good condition to go to work. Our bulls are young but they were raised here and will work in this environment with little transition time.

We appreciate your support at our sales and the confidence you have in our animals.

Thank you,

*Houston*

Houston McKenzie  
President, McKenzie Land & Livestock

Sarah McKenzie  
Herd Manager

## Sale Terms and Conditions

### **Sale order:**

Bulls will sell in the order listed in the catalog. The LOT number can be found on the green tag in the left ear. Sale order is determined by average daily gain within the following groups: Registered Larger Bulls, Commercial Larger Bulls, Commercial Heifers, Registered Smaller Bulls and Commercial Smaller Bulls. Please listen for announcements regarding sale order.

### **Palma Commercial Bulls:**

Commercial bulls from our MLL Palma Ranch in Santa Rosa, New Mexico are in the sale again this year. These bulls are out of commercial cows that we used at Fort Stockton, you might remember the "Cortese" cows. The cows were moved to Palma in the fall of 2011 to "greener pastures." Our cows did great up there, had a lot more feed and raised bigger calves than the Texas cows. Because they were in a commercial setting, we have no data on dam or sire of these bulls. But we can tell you they are straight Angus and all have registered Angus sires.

### **Fertility:**

All sale bulls are guaranteed virgin and have passed a breeding soundness exam with excellent semen quality. The testing of these animals was performed on February 24 and 25, 2015 by Dr. Ronald Box, DVM.

Although these bulls are young, yearling bulls can be used effectively when turned out with cows at a stocking ratio of 15 cows/1 bull.

### **Delivery options:**

Buyers are responsible for transportation of bulls purchased at the sale. New Mexico buyers will have the option of picking up their bulls at the MLL Palma Ranch; 40 miles west of Santa Rosa at no additional charge.

### **Loading:**

All bulls will be paid for before loading unless other arrangements are made. Please see the cashier to settle up prior to loading your bull; you will need your invoice/loading ticket when picking up your bull(s). Please listen to general announcements indicating location of loading and personnel responsible for loading. *Please help us and double check the eartag and lot number to ensure that you are getting the bull you purchased.*

**Guarantee:** We guarantee that all animals in the sale are fertile to the best of our knowledge. If a bull is injured at any time in the first 12 months of ownership so as to make them functionally infertile, we will offer a suitable replacement if available. If not available we will offer you a credit equal to the bull's purchase price minus the salvage value received for that bull. We ask that you contact us prior to the disposal of the animal. HOWEVER, we cannot offer a guarantee on a death of an animal.

### ***Please remember:***

It is important to consider that these are young bulls; they will need to be taken care of to ensure that they continue to grow out good and be able to serve your herd. It is essential that a young bull not get too thin.

### **Sire Information:**

The first section of the catalog features the sires of the bulls for sale. The first Artificial Insemination (AI) sires include: ALC Big Eye, B3R Tender Ten, Connealy Final Product, GAR Predestined, Gardens Wave and SS Objective T510 OT26; the rest of the sires are natural service sires owned by MLL.

## CATALOG INFORMATION

### REGISTERED OR COMMERCIAL?

There are several ways to differentiate between the registered and commercial animals in the sale. All commercial animals have a "C" before the number in their name. All commercial animals have a "registration number" that starts with a "6".

Example: MLL OBJECTIVE C3006; 622639910 (*this is an AI calf but is un-registerable because his great-granddam's papers were not in order.*) The Angus Association allows us to collect and track data on the commercial animals, so they are treated just like our registered animals.

### COMMERCIAL HEIFERS

We are selling 16 commercial heifers from our herd. These heifers have been treated just like registered animals with the exception that we did not find out the sire. There are several AI heifers that are for sale and they will be sold in lots of 4 head/lot.

### COMMENTS SECTION

This section contains information that is not shown in the table, but that we feel adds additional sorting tools for the customer. You will find the following comments in this section: Calving Ease, Average Daily Gain, Average Daily Gain Ratio, Top % EPD comparison and any genetic testing that was done.

### CALVING EASE

Bulls that we feel comfortable in using on heifers are labeled **\*\*CALVING EASE PROSPECT\*\***. You can also refer to the CED EPD to help with selecting a calving ease bull. However, it is important to remember that there other factors that play into a heifer's unassisted delivery and we cannot guarantee a calving ease.

### AVERAGE DAILY GAIN(ADG)

This is the average daily gain of the bull during the 95 day gain test. . Bulls were put on feed 11/6/13 and a final weight was taken 2/12/14.

### GAIN RATIO (ADG Ratio):

The bulls in the sale are ranked by their gain ratio within their respective groups as explained under sale order The top gaining registered bull will be the first in the sale. You will see the gain ratio in the catalog under the "notes" section (**ADG Ratio**).

### TOP % EPD comments

These numbers highlight how that individual bull ranks within the entire breed. For example: MLL WAVE 3522 ranks: Top 10% CED EPD, Top 4% REA EPD...this bulls CED EPD ranks in the top 10% of the Angus breed and in the top 4% of the Angus breed for REA EPD.

• • •  
*One ton of alfalfa hay will be given to the high dollar volume buyer and one ton of alfalfa hay will be given to the buyer of the high selling bull.*

## Glossary of Terms

**Expected Progeny Difference (EPD)**, is the prediction of how future progeny of each animal are expected to perform relative to the progeny of other animals listed in the database. EPDs are expressed in units of measure for the trait, plus or minus. [Interim EPDs](#) may appear on young animals when their performance has yet to be incorporated into the American Angus Association National Cattle Evaluation (NCE) procedures. This EPD will be preceded by an "I", and may or may not include the animal's own performance record for a particular trait, depending on its availability, appropriate contemporary grouping, or data edits needed for NCE.

**\$Value Indexes**, are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows and if calves were exposed to the same environment.

### PRODUCTION EPDs

**Calving Ease Direct (CED)**, is expressed as a difference in percentage of unassisted births, with a higher value indicating greater calving ease in first-calf heifers. It predicts the average difference in ease with which a sire's calves will be born when he is bred to first-calf heifers.

**Birth Weight EPD (BW)**, expressed in pounds, is a predictor of a sire's ability to transmit birth weight to his progeny compared to that of other sires.

**Weaning Weight EPD (WW)**, expressed in pounds, is a predictor of a sire's ability to transmit weaning growth to his progeny compared to that of other sires.

**Yearling Weight EPD (YW)**, expressed in pounds, is a predictor of a sire's ability to transmit yearling growth to his progeny compared to that of other sires.

**Scrotal Circumference EPD (SC)**, expressed in centimeters, is a predictor of the difference in transmitting ability for scrotal size compared to that of other sires.

### MATERNAL EPDs

**Maternal Milk EPD (Milk)**, is a predictor of a sire's genetic merit for milk and mothering ability as expressed in his daughters compared to daughters of other sires. In other words, it is that part of a calf's weaning weight attributed to milk and mothering ability.

**Cow Energy Value (\$EN)**, expressed in dollar savings per cow per year, assesses differences in cow energy requirements as an expected dollar savings

difference in daughters of sires. A larger value is more favorable when comparing two animals (more dollars saved on feed energy expenses). Components for computing the cow \$EN savings difference include lactation energy requirements and energy costs associated with differences in mature cow size.

### CARCASS EPDs

**Carcass Weight EPD (CW)**, expressed in pounds is a predictor of the differences in hot carcass weight of a sire's progeny compared to progeny of other sires.

**Marbling EPD (Marb)**, expressed as a fraction of the difference in USDA marbling score of a sire's progeny compared to progeny of other sires.

**Ribeye Area EPD (RE)**, expressed in square inches, is a predictor of the difference in ribeye area of a sire's progeny compared to progeny of other sires.

**Fat Thickness EPD (Fat)**, expressed in inches, is a predictor of the differences in external fat thickness at the 12th rib (as measured between the 12th and 13th ribs) of a sire's progeny compared to progeny of other sires.

### \$VALUE INDEXES

\$Value indexes are multi-trait selection indexes, expressed in dollars per head, to assist beef producers by adding simplicity to genetic selection decisions. The \$Value is an estimate of how future progeny of each sire are expected to perform, on average, compared to progeny of other sires in the database if the sires were randomly mated to cows

and if calves were exposed to the same environment.

**Weaned Calf Value (\$W)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for pre-weaning merit. \$W includes both revenue and cost adjustments associated with differences in birth weight, weaning direct growth, maternal milk and mature cow size.

**Feedlot Value (\$F)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning merit compared to progeny of other sires.

**Grid Value (\$G)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for carcass grid merit compared to progeny of other sires.

**Quality Grade (\$QG)** \$QG represents the quality grade segment of the economic advantage found in \$G. \$QG is intended for the specialized user wanting to place more emphasis on improving quality grade.

The carcass marbling (Marb) EPD contributes to \$QG.

**Yield Grade (\$YG)** \$YG represents the yield grade segment of the economic advantage found in \$G. \$YG is intended for the specialized user wanting to place more emphasis on red meat yield. It provides a multi-trait approach to encompass ribeye, fat thickness and weight into an economic value for red meat yield.

**Beef Value (\$B)**, an index value expressed in dollars per head, is the expected average difference in future progeny performance for postweaning and carcass value compared to progeny of other sires.

#### **ULTRASOUND DATA**

Ultrasound allows for the evaluation of the carcass traits on a live animal. The three carcass measures that the ultrasound system estimates are: back fat (Rib), rib eye area (REA) and intramuscular fat (%IMF).

The numbers shown on in the catalog are the actual data for ultrasound data.

### **Genetic Defect Information**

We test all the bulls registered and commercial) raised on the Fort Stockton ranch for any genetic defects that they may be at risk of carrying. Testing is done through Zoetis Genetics and the genetic status is listed in the notes section. You will see that we have tested some animals for the following: **AM**(*Arthrogryposis Multiplex*), **CA**(*Contractural Arachnodactyly*), **NH**(*Neuropathic Hydrocephalus*) and **DD**(*Developmental Duplication*). We have made a practice of culling animals that are carriers for AM, CA and NH so only a few of the bulls will have to be tested for these defects and will be noted by having the defect abbreviation followed by a "F" for example: **CAF**. We do not routinely sell defect carriers; the only carriers that you will find in the sale will be DD carriers. All other animals will be listed as "F". We cannot guarantee defect status of Palma bulls, as they are strictly a commercially produced animal, but in a commercial setting there should be little risk of defect expression.

**New Defect: DD** Most recently a new defect called Developmental Duplication (DD) has been found in the breed. DD is a simply inherited, recessive genetic condition that can cause (although not always) an affected animal to be born with an extra front limb. While this is recognized as a genetic defect and is known to be simply inherited; it is not required to test for this defect prior to registration. (*Please see additional information on DD*).

We have tested any of our bulls that could be a potential carrier. There are several top bulls in this sale that are DDC (DD Carriers); but we feel that the risk of this defect actually showing up in a registered herd is manageable and poses *little risk for the commercial producer*. **Carriers will be noted in the notes section as DDC.**
